Applicant's Response

1. In Applicant's Response dated 03/16/2010, Applicant files an amendment to the claims in line with the guidance presented in an interview held on 03/16/2010. Applicant's arguments are persuasive (See argument page 10, middle). Specifically, the prior art of Forest does not teach outputting an audible of customized content to a particular icon after an amount of time has elapsed without receipt of user input and without indicating selection of the menu.

All objections and rejections previously set forth are withdrawn.

Interview Summary

Applicant arranged for an interview with the Examiner on 02/23/2010. The examiner reviewed the prior art and discussed the claims in light of the claims. The examiner explained the office position regarding the breadth of the claims. The examiner indicated that the proposed new features reviewed in the interview would overcome the prior art and upon formal submission would be considered by the examiner for potential allowance over the art as a whole.

Allowable Subject Matter

1. Claims 49-72 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claims 49, 52, 61, 65, and 67:

The closest prior art of Umemoto et al (hereinafter Umemoto) teaches a menu system that allows the user to select items after the items are audibly read to the user. Umemoto teaches a system where the user can interact with the menus and the menus can play media information. The amended features of the claims require that the use select a customization setting and the content of the audible output is customized based on the setting. Further the claims require the same navigation icon that presents an audible output will present a different audible output for different media types only after the user input has not indicated movement to another icon and

Art Unit: 2179

has not indicated selection of the same icon. Umemoto's device does not allow for dwell selections nor for a customization of the audible outputs via a users selection.

Hiipakka et al. teaches a mechanism to present auditory icons on an interface. The icons can be tailored based on context and pre-set preferences set by the user. Hiipakka does not use select a customization setting and the content of the audible output is customized based on the setting. The settings of Hiipakka allow for a profile setting of information presented to the user, which can be media. However, the claims require the same navigation icon that presents an audible output will present a different audible output for different media types only after the user input has not indicated movement to another icon and has not indicated selection of the same icon, as recited in the claims.

The prior art of Forest et al. teaches a dwell time menu system that allows the user to place a cursor over the menu and wait for a further input to indicate an action. Forest teaches the user can receive an output in the form of audio if they hold the cursor over the menu. The amended features of the claims require that the use select a customization setting and the content of the audible output is customized based on the setting. Further the claims require the same navigation icon that presents an audible output will present a different audible output for different media types only after the user input has not indicated movement to another icon and has not indicated selection of the same icon. Forest is not seen as suggesting the amended features because the dwell does not allow for selecting the same icon and receiving customization of audio based on the settings made by the user.

The prior art of Litwiller et al. teaches a system on a touch screen that allows the user to receive an input on an item and waits for the user to perform a function. Audio feedback is provided upon selection. The system waits for the second input. Litwiller teaches the menu selection can lead to the selection or presentation of a second set of options. The claims require the same navigation icon that presents an audible output will present a different audible output for

Art Unit: 2179

different media types only after the user input has not indicated movement to another icon and has not indicated selection of the same icon. Litwiller is not seen as suggesting the amended features because the dwell does not allow for selecting the same icon and receiving customization of audio based on the settings made by the user. Litwiller does not suggest providing a customization option to tailor the output on the device.

Therefore, in light of the applicant's amendment, the prior art does not teach or suggest the combined limitations of the amended claims as submitted. Therefore, the claims as amended are allowable.

These dependent claims incorporate the features of the independent claims and are allowable for the same rationale.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven B. Theriault whose telephone number is (571) 272-5867. The examiner can normally be reached on M-F 7:30 - 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Weilun Lo can be reached on (571) 272-4847. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
